Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The following changes were made to the claims:

In claim 5, line 1, the word "when" was changed to "wherein".

In claim 18, line 2, the word "roadway" was changed to "vehicle path".

In claim 21, line 1, the phrase "emitting means" was changed to "first emitter".

In claim 22, line 1, the word "means" was changed to "mirror face".

Mr. Greg Kang verbally approved these changes on January 9, 2004.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: The Applicant filed an amendment received on October 29, 2003. In this amendment, Applicant amended claims and added new claims. No new matter was introduced. Regarding independent claim 12, Applicant's arguments are persuasive. A review of prior art failed to disclose or make obvious an optical system for gas component analysis comprising a monolithic ellipsoidal mirror that receives the beam from the spinning mirror and directs the beam through the filters.

Claims 2-11, 13-19, 21, 22, 24 and 25 are allowed by virtue of their dependence upon claim 12 or claims that ultimately depend upon claim 12.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent 5,343,043 to Johnson describes an optical system for gas analysis comprising a first emitter on a first side of a vehicle path, a receiver, filter elements and a spinning mirror. U.S. Patent 4,941,163 to Hoover describes placing a detector at the focus of an ellipsoidal mirror. However, both of these references are silent with respect to a monolithic ellipsoidal mirror that receives the beam from the spinning mirror and directs the beam through the filters.
